www.tntextbooks.in

- The blood consists of two main components. The fluid plasma and the formed elements (blood cells) which are found suspended in the plasma.
- A muscular pumping organ that pumps out the blood into the blood vessels is called heart.
- The blood circulates in our body as oxygenated and deoxygenated blood.
- The supply of blood to the heart muscles (cardiac muscles) is called as coronary circulation.
- One complete contraction (systole) and relaxation (diastole) of atrium and ventricles of heart is called a heartbeat.
- The sequence of events which occur during the beginning and completion of one heart beat is called cardiac cycle.
- Blood pressure is usually expressed as systolic pressure and diastolic pressure (120mm / 80 mm Hg)
- An individual has one of the four blood groups A, B, AB and O.
- Rh factor was discovered by Landsteiner and Wiener in 1940.
- Lymph is a colourless fluid formed when plasma, proteins and blood cells escape into intercellular spaces in the tissues through the pores present in the walls of capillaries.

## TEXTBOOK EVALUATION

### I. Choose the correct answer

1. Active transport involves
   a) movement of molecules from lower to higher concentration
   b) expenditure of energy
   c) it is an uphill task
   d) all of the above

2. Water which is absorbed by roots is transported to aerial parts of the plant through
   a) cortex b) epidermis
   c) phloem d) xylem

3. During transpiration there is loss of
   a) carbon dioxide b) oxygen
   c) water d) none of the above

4. Root hairs are
   a) cortical cell b) projection of epidermal cell
   c) unicellular d) both b and c

5. Which of the following process requires energy?
   a) active transport b) diffusion
   c) osmosis d) all of them

6. The wall of human heart is made of
   a) Endocardium b) Epicardium
   c) Myocardium d) All of the above

7. Which is the correct sequence of blood flow
   a) ventricle → atrium → vein → arteries
   b) atrium →ventricle → veins → arteries
   c) atrium → ventricle → arteries → vein
   d) ventricles → vein → atrium → arteries

8. A patient with blood group **O** was injured in an accident and has blood loss. Which group of blood should be used by doctor for transfusion?
   a) O group b) AB group
   c) A or B group d) all blood group
