Procedure:

A pinch of crystalline copper sulphate taken in a test tube and heated for sometime. Water droplets are seen on the inner walls of the test tube. This shows that the given salt contains water of crystallization. If the above observation is not noticed for the given salt, the water of hydration is absent.

Result:

In the given sample of salt, Water of crystallization / hydration is

A) Present

B) Absent

7. TEST THE GIVEN SAMPLE FOR THE PRESENCE OF ACID OR BASE

Aim:

To identify the presence of an acid or a base in a given sample.

Materials Required:

Test tubes, test tube stand, glass rod, phenolphthalein, methyl orange, sodium carbonate salt and the given sample.

Principle:

In acid medium,

(a) Phenolphthalein is colourless

(b) Methyl orange is pink in colour

(c) Sodium carbonate gives brisk effervescence.

In Base medium,

(a) Phenolphthalein is pink in colour

(b) Methyl orange is yellow in colour

(c) Sodium carbonate does not give brisk effervescence.

Procedure:

S. No	Experiment	Observation (Colour change)	Inference (Acid / Base)
1	Take 5ml of the test solution in a test tube and add a few drops of Phenolphthalein in it.	a) No change in colour. b) Solution Turns pink in colour	a) Presence of acid b) Presence of base
2	Take 5ml of the test solution in a test tube and add a few drops of Methyl orange in it.	a) SolutionTurns pink in colour b) SolutionTurns yellow in colour	a) Presence of acid b) Presence of base
3	Take 5ml of the test solution in a test tube and add a pinch of sodium carbonate salt.	a) Brisk effervescence occurs. b) No brisk effervescence.	a) Presence of acid b) Presence of base

Result: The given test solution contains _____ (acid / base).
