Points to Remember

- Modern periodic law states that, the physical and chemical properties of the elements are the periodic functions of their atomic numbers.
- The table in which elements are arranged in rows and columns in regular gradation is called periodic table.
- Smelting is the process of reducing the roasted metallic oxide into metal in molten condition.
- Dilute or con. HNO_3 does not attack aluminium metal ,as it renders aluminium passive due to oxide film formation on its surface.
- The charge used in the metallurgy of iron consists of roasted ore, coke and limestone in the ratio, 8:4:1.
- Copper vessel on exposure to air and moisture forms a green layer on its surface due to basic copper carbonate.
- An alloy is a homogeneous mixture of two or more metals.
- An amalgam is an alloy of mercury with another metal. E.g. Ag-Sn amalgam is used for dental filling.
- The chemical name of rust is hydrated ferric oxide and its formula is $Fe_2O_3 \cdot xH_2O$.
