- Change in food and sleeping habits.
- Fluctuation in body weight and appetite
- Always looking out for an easy way to get money for obtaining drugs.
- Prone to infections like AIDS and Hepatitis-B.

DO YOU KNOW?

World Health Organization (WHO) 1984 suggested the use of the term drug dependence in place of drug addiction or drug abuse

21.3.4 Drug De-addiction

Management of de-addiction is a complicated and difficult task. The path to recovery of drug addicts is long and often slow.

Family members, friends and society on the whole have a very important role to play.

28UJZ

Detoxification: The first phase of treatment is detoxification. The drug is stopped gradually and the addict is helped to **overcome the withdrawal symptoms**. The addict undergoes severe physical and emotional disturbance. This is taken care by specific medication.

Psychotherapy: Individual and group counselling is given by psychologists and counsellors. The treatment includes efforts to reduce the addict's stress, taught new ways to solve everyday's problems, adequate diet, rest and relaxation.

Counselling to family members: Social workers counsell family members in order to change the **attitude of rejection** so that the addict is accepted by the family and the society.

Rehabilitation: They are given proper **vocational training** so that they can lead a healthy life and become useful members of the society.
