12. OBSERVATION OF MODELS-HUMAN HEART AND HUMAN BRAIN

Identification of longitudinal section (L.S) of the human heart.

Aim:

To observe and draw a labelled sketch of L.S of human heart and describe the structure.

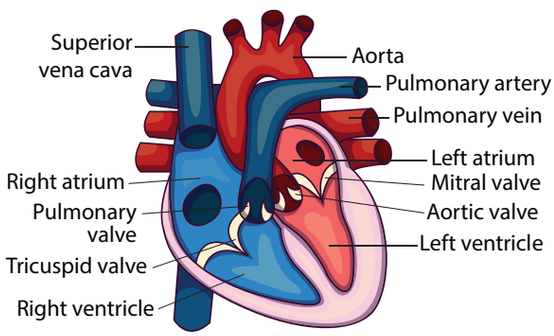

Materials Required:

Model showing the L.S of human heart

Observation:

The given model is identified as L.S. of human heart

1. The human heart has four chambers. It is made up of two auricles and two ventricles
2. The auricles are separated by interauricular septum and ventricles are separated by interventricular septum. It prevents the mixing of oxygenated and deoxygenated blood.
3. Tricuspid valve - It is located between the right auricle and the right ventricle

4. Bicuspid valve - It is located between the left auricle and the left ventricle
5. The heart is covered by a protective double walled membrane called pericardium
6. The heart pumps blood to all parts of the body.

Identification of L.S of the human brain.

Aim:

To observe and draw a labelled sketch of L.S of human brain and comment on it

Materials Required

Model showing the L.S of human brain
