Note

- Modulus function is not a linear function but it is composed of two linear functions x and $-x$.
- Linear functions are always one-one functions and has applications in Cryptography as well as in several branches of Science and Technology.

1.10.3 Quadratic Function

A function $f : \mathbb{R} \to \mathbb{R}$ defined by $f(x) = ax^2 + bx + c, (a \neq 0)$ is called a quadratic function.

Some specific quadratic functions and their graphs

Function, Domain, Range and Definition	Graph
$f : \mathbb{R} \to \mathbb{R}$ defined by $f(x) = x^2, x \in \mathbb{R}$. $f(x) \in [0, \infty)$	 Fig. 1.47(a)
$f : \mathbb{R} \to \mathbb{R}$ defined by $f(x) = -x^2, x \in \mathbb{R}$. $f(x) \in (-\infty, 0]$	 Fig. 1.47(b)

1.10.4 Cubic Function

A function $f : \mathbb{R} \to \mathbb{R}$ defined by $f(x) = ax^3 + bx^2 + cx + d, (a \neq 0)$ is called a cubic function.

The graph of $f(x) = x^3$ is shown in Fig.1.48.

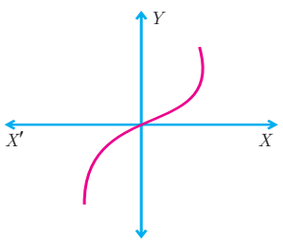

Fig. 1.48

1.10.5 Reciprocal Function

A function $f : \mathbb{R} - \{0\} \to \mathbb{R}$ defined by $f(x) = \frac{1}{x}$ is called a reciprocal function (Fig.1.49).
