Unit Exercise - 3

1. Solve $\frac{1}{3}(x+y-5)=y-z=2x-11=9-(x+2z)$
2. One hundred and fifty students are admitted to a school. They are distrbuted over three sections A, B and C. If 6 students are shifted from section A to section C, the sections will have equal number of students. If 4 times of students of section C exceeds the number of students of section A by the number of students in section B, find the number of students in the three sections.
