Equation of straight line in various forms

Form	Name	Form	Name
$ax + by + c = 0$	General form	$\frac{x}{a} + \frac{y}{b} = 1$	Intercept form
$y - y_1 = m(x - x_1)$	Point-slope form	$x = c$	Parallel to Y axis
$y = mx + c$	Slope-intercept	$y = b$	Parallel to X axis
$\frac{y - y_1}{y_2 - y_1} = \frac{x - x_1}{x_2 - x_1}$	Two point form		

- Two straight lines are parallel if and only if their slopes are equal.
- Two straight lines with well defined slopes m_1, m_2 are perpendicular if and only if $m_1 \times m_2 = -1$.

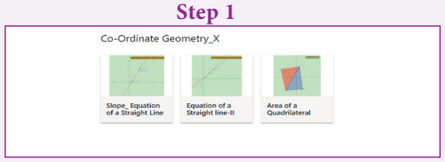

ICT CORNER

ICT 5.1

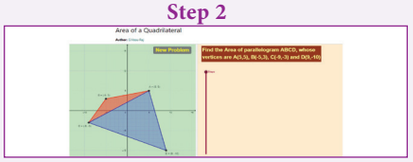

Step 1: Open the Browser type the URL Link given below (or) Scan the QR Code. GeoGebra work book named **"Co-Ordinate Geometry"** will open. In the left side of the work book there are many activity related to mensuration chapter. Select the work sheet **"Area of a Quadrilateral"**

Step 2: In the given worksheet you can change the Question by clicking on "New Problem". Move the slider to see the steps. Work out each problem and verify your answer.

ICT 5.2

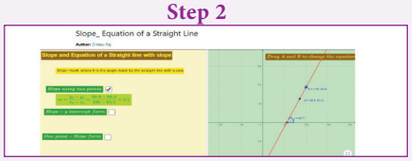

Step 1: Open the Browser type the URL Link given below (or) Scan the QR Code. GeoGebra work book named **"Co-Ordinate Geometry"** will open. In the left side of the work book there are many activity related to mensuration chapter. Select the work sheet **"Slope_Equation of a Straight Line"**

Step 2: In the given worksheet you can change the Line by Dragging the points A and B on graph. Click on the Check boxes on Left Hand Side to see various forms of same straight line.

Step 1

Step 2
